

AI Prompt Optimization Report

Original Prompt: create a login page using HTML and CSS

Optimized Prompt: Design and implement a modern, responsive login page using semantic HTML5 and CSS3. The page should feature a clean, minimalist aesthetic with a centered form. Include input fields for 'Username/Email' and 'Password', a 'Remember Me' checkbox, a 'Forgot Password?' link, and a 'Login' button. Ensure the design is fully responsive across different screen sizes and incorporates accessibility best practices (e.g., ARIA attributes, proper labeling). Provide a subtle hover effect for interactive elements and suggest a neutral color palette. The page should be ready for integration into a web application.

Quality Score: 65/100

Category: Web Development / Frontend

Suggestions:

- Review the optimized prompt.
- Add more context if needed.
- Use examples for better results.
- Test the prompt with AI.
